Ceramic plunger pump

Introduction:

YB series ceramic plunger pump is a hydraulic displacement parallel pump double acting volume type pump. Using α -type alumina as the plunger, it has extremely high wear resistance and corrosion resistance. The pump has stable and reliable operation, high output pressure and accurate measurement, low pressure fluctuation, low noise, acid and alkali resistance, easy operation and maintenance, and use Long life and other characteristics, used with filter press is the most ideal product for various types of solid-liquid separation.
