

**Brief-introduction:**

GHS0353 hydroseeding machine is one mid-size, new type, simple operation and maintenance. It is ideal environment hydroseeder machine. This machine comes with diesel power, centralized electronic control, equip with Gaodetec seeding machine dedicated pumps. Use continuously variable transmission agitator agitating the slurry tank to form a two-dimensional or three-dimensional circulation flow to achieve blending solids with water. Suitable for all kinds seeding fiber cover construction needs. Widely used in highway (rail) Road slope vegetation protection, biological protection embankments and large garden project. Currently, it is the ideal green plants planting machinery and ecological restoration engineering equipment.

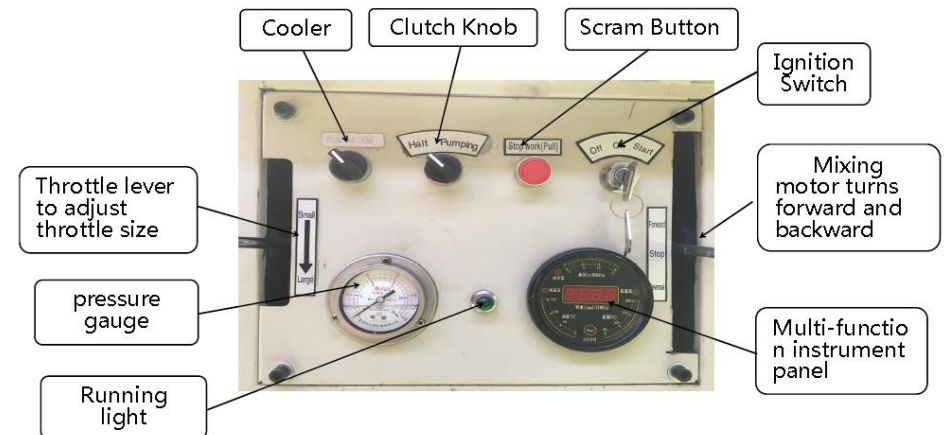

**Detailed parameter:**

Model	GHS0353 Hydroseeder Machine	GHS0353 Hydroseeder Machine With Trailer
Power	53KW, Chinese brand engine, water-cooled/air cooled	
Tank Size	Liquid capacity: 3000L Working capacity: 2550L	
Pump	Centrifugal pump:4"x2" (10X5cm), 70m³/h@7bar, 10mm solid clearance	
Agitation	Mechanical agitator with helical paddle orientation and liquid recirculation	
Rotating speed of mixer shaft	0-110rpm	
Maximum horizontal conveying distance	60m	
Spraying guns type	Fixed standing gun	
Height of fence	1100mm	
Dimensions	3350x2030x2600mm	4800x2100x2900mm with trailer
Weight	2950kgs	3500kgs with trailer
	Stainless steel material for whole unit	
	Hose reel with hose	
	Remote control unit	
Options	Trailer	

**Structure:**

The machine is made of power system (diesel engine), electromagnetic clutch, the hydraulic pump, oil control systems, hydraulic motors, instrument panels, and spray devices and other components.
